

EZ4-3WS

QUAD 16:9 LCD in only 2U

Naturally,
Murraypro were first
to offer this new LCD format

EZ4-3WS is the smallest multiple 16:9 monitor available.

Noted for its bright and clear pictures which are viewable from an impressively wide angle, this versatile product finds ready use in applications ranging from Field flyaway kit to Base Edit Suites. Switchable Aspect Ratio enables both current and heritage material to be displayed correctly. Front panel selection between two video inputs is standard, as is the PAL/NTSC auto-switching. A major feature of this diminutive LCD monitor, only 2U high & 7 cm deep, is the internal "universal" power supply which eliminates external boxes. An Ext +12 V input is provided for battery operation. EZ4-3WS accommodates 4 SDI input cards internally, whilst a whisper quiet fan ensures cool running under all operational conditions. High Z looping CVBS inputs may be specified, replacing the standard 75 ohm input terminations. Red Tally lamps are standard, but a multicoloured option is available too. Image cut off is almost imperceptible, and the EZ4-3WS may be relied upon to show discerning viewers the whole picture, in both the vertical and horizontal plane. White LED backlight illumination promises to endow the EZ4-3WS with a long and trouble free life.

Outline Specification

- * Only 2U High, 70mm deep.
- * 16:9 native, 4:3 switchable.
- * Universal Power Supply.
- * Fully tiltable LCD panel.
- * Internal SDI available
