

Murraypro Compact Duo HD

the whole picture

Integral SDI de-embedding

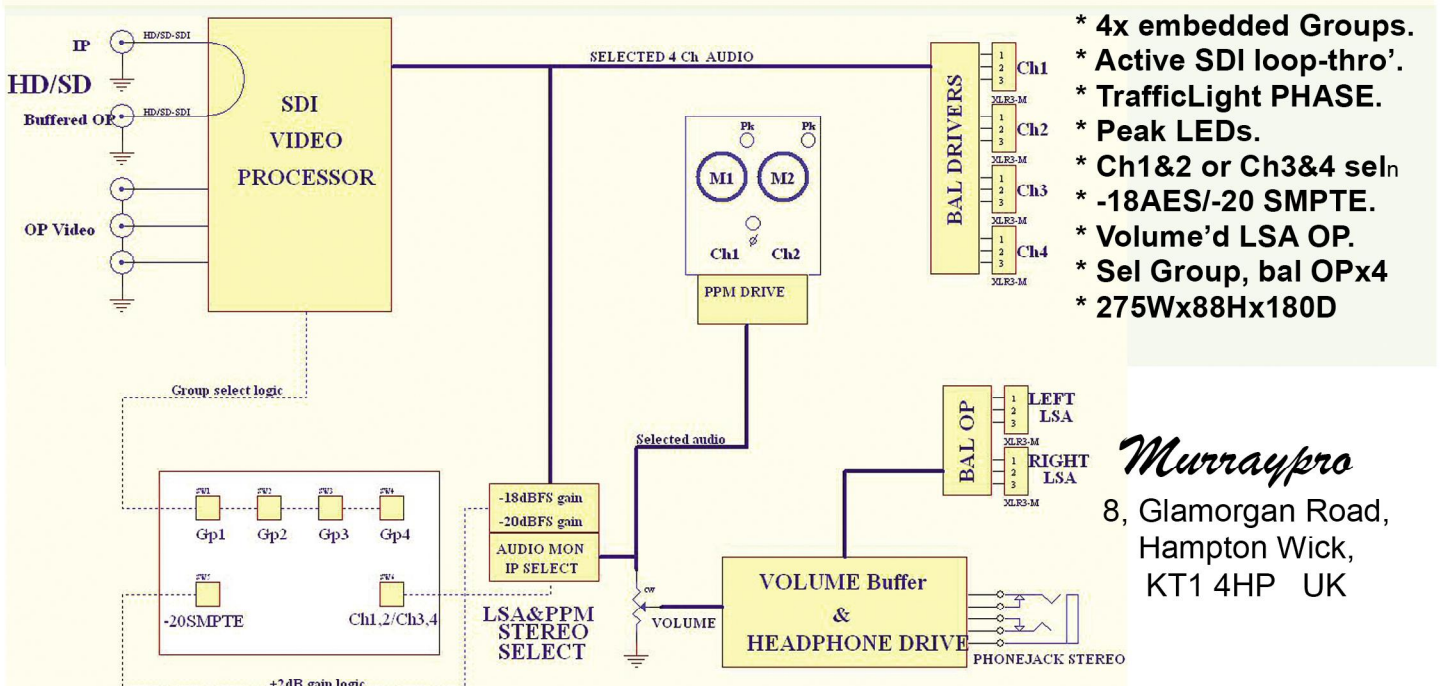

Free-stand or 2U mount.

4 Stereo Groups, PPM, PHASE, Peak LED & Speaker drive,

"Touch Latch" selection between the 4 embedded Groups provides Flyaway Kit, Edit Suites & CARs with comprehensive and cost effective monitoring facilities. The generously sized "Type 22" meters allow practical audio level monitoring with extended separation between meter and monitor in larger Control Rooms. Instant selection between Channel 1 & 2 or Channel 3 & 4 of the selected Group is performed by the front panel switch. When jacked, the (level-limited) Phones mute the ext Speaker' drive to provide high quality private monitoring of stereo sources.

The "Traffic light" concept is a major feature of all Murraypro audio meters, with PHASE and PEAK Levels policed on LEDs. The ever alert GREEN Phase LED or Peak LEDs snap to RED immediately any trouble is detected on the selected input, saving vital time and possibly much expense later! Reclocked & equalised "active loop" SDI is provided, eliminating a separate VDA feed to the 'Duo'. Balanced outputs of the selected Group & volume control are available on rear panel XLR-3Ms. Scaled Video output is available, which is configured for YUV, RGSB, Y+C or CVBS as required.
